

# First Naviswiss Surgeries in Japan

May 11<sup>th</sup>, 2020

Naviswiss is pleased to announce the first usage of its small, handheld surgical navigation system in Japan.

Dr. Hasegawa and his team of Mie University supported by our distribution partner KYOCERA used the Naviswiss system for the first time in Japan. Several total hip replacement surgeries with navigation assistance were performed. The system worked well and stable and the accuracy was within the expected range.

We are pleased that the miniaturized Naviswiss hip navigation system now also helps surgeons in Japan to achieve the best results for their patients.
